Product Information

This product is a square block for the cost effective supplementation of sodium and trace elements. **This product contains traces of copper so should not be fed to sheep.**

Salt, minerals and trace elements are an essential part of the daily diet of all animals if they are to perform cost effectively.

Salt deficiency can lead to loss of appetite, periods of depressed growth and poor milk production - especially in dairy cattle. When this occurs the animal may develop cravings: drinking urine, licking gates, walls, stones and other unlikely objects.

Stock fed on silage also require more salt than those fed on hay, and similarly grazing animals need more than twice the salt of those fed dry feeds.

The most common way to diagnose salt deficiency is to observe the improvements in appetite, appearance and productivity after feeding supplementary salt.

Availability:	Packed in 2 x 10kg cartons
Per Pallet	60 cartons per pallet

Suitable for: Multi-species with the exception of sheep (due to the inclusion of copper in the product).

Nutribio Product Code: 1915
