

TMR G

Feed Preservative

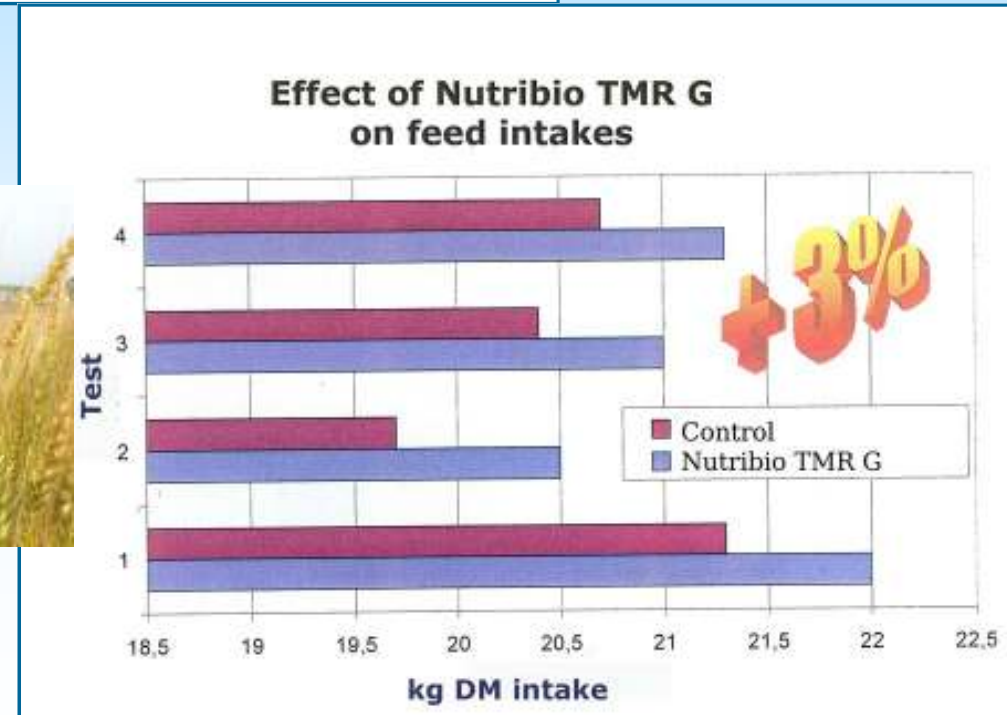

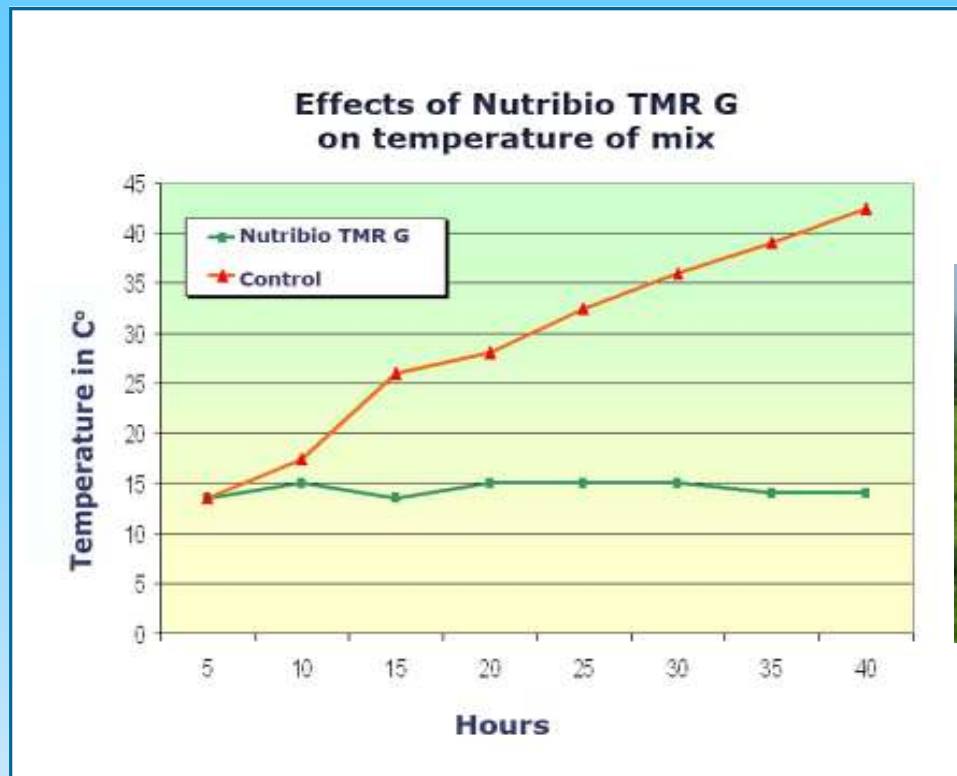

Nutribio TMR G is a speciality liquid feed preservative which contains a number of glucose precursors for an effective boost to animal health and feed quality.

Nutribio TMR G increases the stability of the TMR by inhibiting yeasts and other nutrient-degrading micro organisms.

The feed remains fresh and palatable for up to three days. additionally regulates blood sugar levels and reduces the metabolic load.

The benefits of using Nutribio TMR G include:

1. It is **very palatable**
2. It **increases feed intake**.
3. Very **high in energy** 18MJ/Lt
4. **Reduces the risk of ketosis**
5. Keeps the **TMR mix cool**
6. **Helps prevent** the growth of **moulds**
7. It is in **liquid form** therefore the **application** of it is **easy** through a mixer wagon.

Why Buffer Feed?

- The target for dry matter intake is 3.5% of body weight e.g. 625kg cow = 21.9kgs.
- The maximum got from grass is 16-18kgs DM depending on grazing conditions.
- Restricting pasture intakes to hold rotation length and maintain quality.
- Long dry spells.
- The cows at 50 days in milk need to be gaining 0.2kg daily liveweight gain and at 150 days in milk 0.3kgs to ensure that:
 1. She goes back in calf
 2. She dries off at a condition score of 3.2
- Concentrates have grown increasingly expensive.

In Summary: Nutribio TMR G

- Keeps the TMR cool and fresh, prevents mould growth and increases intakes by 3%.
- This allows the TMR to be made for up to a 3 day period.
- Contains glucose precursors, which benefit liver function by aiding nitrogen utilisation, therefore keeping up the milk lactose and benefiting fertility.
- TMR G is very high in energy 18MJ/Litre, wheat = 13.5 MJ/kg.
- The more dry matter being buffer fed the greater the savings.
- Knowing that the cows can now be fed economically will ensure that productivity, fertility and profitability can be achieved.

Recommended Usage:

3 Litres per Tonne of TMR

Product Availability:

The product is available in 210 litre barrels

TMR G
FEED PRESERVATIVE

Buffer Feeding this grazing season

Nutribio TMR G helps:

- Keep your TMR fresh and palatable for up to 3 days
- Increase intakes and profitability from Home Grown feeds.
- Inhibit the growth of moulds and yeasts.
